

## About Horn Canna Farm

Hello! We are Dustin and Nikki Snow. We live and work with our five children on our fourth generation farm. Our family has been growing and selling cannas since 1928. We sell large, three to five eye rhizomes, the largest you will find anywhere! Every order is filled by hand just like Grandpa Horn did years ago. We love what we do and even more, we love hearing from our customers and friends on how cannas have brightened their own corner of the world. Each of us at Horn Canna Farm is committed to making your experience with us the very best it can be. It is truly our pleasure to be of service to you!

## Landscaping with Cannas

Not only are cannas EASY to plant and EASY to grow, cannas love full sunlight. They are extremely versatile, providing a burst of color as an accent or planted in a mass of head turning color. Cannas add charm when planted amid grasses, trailing flowers, elephant ears, contrasting annuals and perennials, flowering trees and shrubs of all shapes and sizes. Or plant cannas in rows or borders for a more tailored look. Whether your flowerbeds are flowy and free forming or precisely planned and formal, cannas are an excellent choice to brighten any sunny spot.

## Growing Information

**Blooms:** Cannas are the best at providing bold color throughout the summer. They are top notch for creating magnificent curb appeal even on the hottest summer days. Cannas bloom in large clusters. As blooms wither, new buds are already forming within the stalk. This allows the plants to be in continuous bloom from July until frost. Cannas bloom in colors of red, yellow, pink and orange.

**Foliage:** Cannas make a big statement with their lush, tropical foliage. Foliage color varies from several hues of green to shades of purple, red, bronze and chocolate. To add even more intrigue we offer three varieties with variegated foliage. Some of our giant cannas produce extremely large, wide banana-like leaves, creating dramatic vertical interest in your flowerbeds.

**Planting:** Cannas are best planted in the spring after danger from frost. Ideally cannas are planted when soil temperatures are around 60 degrees. Best results are achieved when planted in loose, fertile and well-draining soil. Amend the soil, if necessary, with composted organic matter. Plant in a sunny location that receives a minimum of four hours of direct sunlight. Full sun is great! Plant the rhizomes 12 to 18 inches apart. Lay the long part

of the rhizome horizontally with the eyes up. And no worries if you cannot determine if the eyes are up or down as the cannas will find their way to the heat at the soil's surface. Only cover the rhizome with one or two inches of soil. This is important! Some gardeners plant cannas deeper than recommended in an attempt to better overwinter cannas left in the ground. Planting cannas too deep will only prolong sprouting and possibly cause the plants to not grow.

**Watering and Fertilizing:** Cannas should be thoroughly watered one to two times a week by slowly soaking the ground. During the hottest weeks of the summer your cannas will thrive with a deep soaking several times each week. Cannas are tropical and love plenty of heat and water. For added performance apply 5-10-5 or 10-10-10 fertilizer two or three times during the growing season. Deadheading cannas is easy and gives your flowerbed a tidy appearance. Simply cut off the spent bloom just below the spent bloom head. There are future blooms developing within the stalk!

**Self Cleaning Blooms:** Six of our varieties are also considered self-cleaning. This means the spent blooms drop by themselves and do not require as much deadheading.

## Our Guarantee

As always, we guarantee all bulbs to be healthy, of excellent quality and true to name. Orders are quality checked at the time of shipment. If bulbs decline during shipment, please notify us immediately. We will gladly remedy the problem.

Our goal is to not only provide outstanding customer service at the time you place an order and receive your cannas, but to also be your source of information throughout the growing seasons.
